The table below shows one way to complete the curriculum requirements for the Neurobiology Major. Your plan may not look the same, please see an academic advisor in Neurobiology about tailoring a plan for you.

Some students may need to take elective courses to meet the 30-credit total required in Biological Sciences for the Neurobiology Major and/or other college/university requirements. Students are encouraged to take more Distributed Neuroscience courses even after they have completed the required 3 courses to fulfill some of these. These slots may also indicate openings for certificate and/or double major options.

---

1. Math determined by placement scores; Neurobiology Major requirement: math level up to and including Math 211, 217, 221 or 275
2. Comm A must be satisfied by the end of the first year, if not satisfied by placement exam.
3. Ethnic Studies requirement must be satisfied within the first 60 credits.
4. Requirement will also be fulfilled with Stat 541 or Botany 575 (Intro to Modern Statistical Methods for Biologists).
5. Zoology 151/152 sequence is recommended; BIOCORE curriculum OR Zoology 101, Zoology 102 and Botany 130 also fulfill this requirement.
6. 3rd level of a language required for B.S. degree, if not met by placement, H.S units, transfer credit.
